PROJECT DEMONSTRATION

# 🎬 Demonstration of Proposed Features

| DATE | NAME | PROJECT | MAX MARKS |
|---|---|---|---|
| 7/9/2026 | K.Hemanth Kumar | OptiCrop – Smart Agricultural Production Optimization Engine | 1 Marks |

## ✅ Feature Implementation Status

| FEATURE | DESCRIPTION | STATUS | DEMONSTRATED | REMARKS |
|---|---|---|---|---|
| Crop Recommendation | Predicts the most suitable crop for given soil/climate conditions using a trained ML model. | Implemented | Yes | Prediction generated successfully |
| Soil & Climate Input Form | Collects N, P, K, temperature, humidity, pH, and rainfall from the user. | Implemented | Yes | User-friendly interface |
| Machine Learning Model Integration | Integrates the trained model.pkl with the Flask application for real-time prediction. | Implemented | Yes | Model loaded successfully |
| Responsive Web Interface | Provides a responsive and attractive interface using HTML, CSS, and JavaScript. | Implemented | Yes | Supports desktop and mobile browsers |
| Result Display | Displays the recommended crop and a short description to the user. | Implemented | Yes | Results displayed correctly |
| Project Documentation & GitHub Repository | Maintains complete project documentation and source code in a GitHub repository. | Implemented | Yes | Repository submitted successfully |
