Empathy Map Canvas — OptiCrop Farmer Persona

A view into how the target farmer persona thinks, feels, sees, hears, says and does when facing the crop-selection problem.

Think, Feel & See

THINK & FEEL

I want my crop choice to be right the first time. I hope this process is simple and trustworthy. I feel anxious about wasting a season on the wrong crop.

SEE

Complex soil test reports. Many crop options and conflicting advice. Advertisements promising guaranteed yields.

Hear, Say & Do

HEAR

Neighbors say some crops failed this season. People say soil testing is complicated. Extension officers promote crops that don't always fit local conditions.

SAY & DO

I try to research crop options online. I ask other farmers what worked for them. I follow up with agricultural extension officers on recommendations.

Pain Points & Gains

PAIN POINTS

Wrong crop choice leading to poor yield. Unclear soil and climate requirements. No real-time, personalized recommendation. Lack of localized advice. Financial loss from failed crops.

GAINS

Fast, personalized crop recommendation. Simple data entry process. Clear suitability reasoning. Higher yield confidence. Better resource planning.
